

COLOR-BY-ANSWER

To complete the printable, the students will solve each equation in the table. They will then choose the correct answer from the choices in the table. The answer they choose is assigned a color. They will color the number (assigned to the question or equation) using the color that matches the correct answer.

The picture is the same for all three printables, but the math skills differ. Choose the best skill for your students at this time of the year.

The math skills are:

- Rounding within 1,000
- 2-3-Digit by 1-Digit Multiplication
- Decimal Place Value

Accountability Tips

For accountability and to make sure that students don't just guess the correct colors, make sure that the students show their work on the backs of the papers or on separate pieces of paper.

Another option is to have them get their answers (and work) checked by you (or partners) and then color in their pictures.

CODE MATH

To complete the printable, the students will solve equations or answer questions using graphics and a graphic key.

Each graphic on the printables represents or matches a number. The students are presented with equations or questions using the graphics. They must use the key to determine the numbers that represent the graphics and then solve the equations or answer the questions.

The graphics are the same for all three printables, but the math skills differ. Choose the best skill for your students at this time of the year.

The math skills are:

- Adding and Subtracting within 1,000
- Writing Whole Numbers (within 1,000,000)
- Multiplying Multi-Digit Numbers
