

About this Sample

This sample contains two complete math centers from my 4th Grade Math Center Bundle. The bundle contains 81 centers, 1-3 centers for each 5th Grade math standard (based on common core standards). Click [here](#) or on the image below to see the full resource.

4TH GRADE MATH CENTERS
Bundle: 81 CENTERS!

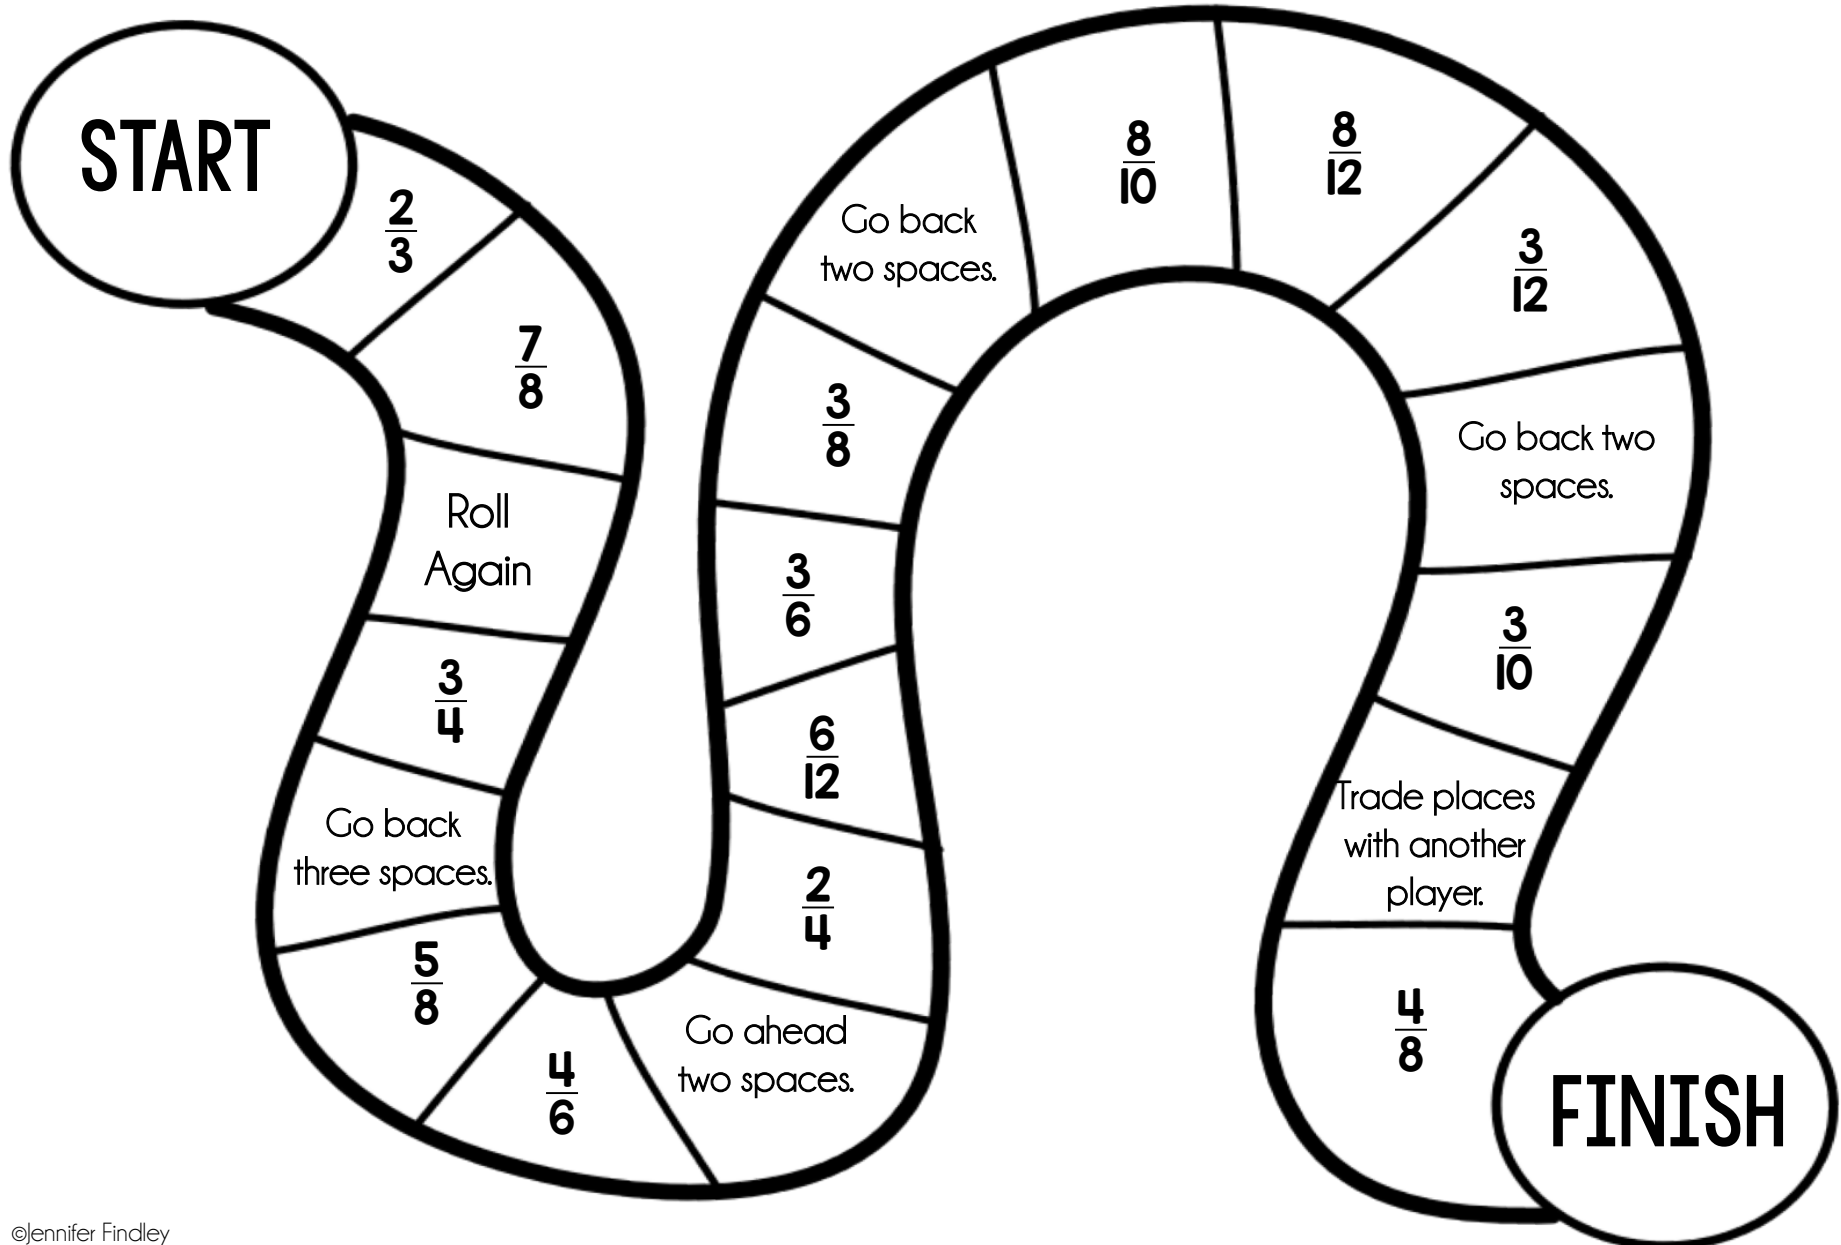

Decompose Your Way to the Finish Line

Teacher Notes: This board game requires the students to decompose fractions as they move around the board.

Directions: Take turns rolling one dice and moving that many places. When you land on a fraction, decompose the fraction.

Fraction Math Libs

- Teacher Notes: These math libs are a fun take on math word problems. The students will fill in the blanks to create unique word problems. They will then solve the word problem. These would be best played with a partner to call out the required blanks so the other partner can not see the context. Laminate these and have the students use an expo marker for reusable use. This set includes adding and subtracting fractions only. Due to the nature of the math libs, no answer key is included.

Fraction Math Libs

Directions: Fill in the blanks in the word problems by looking underneath each blank to see what to write in the blank. Create fractions and mixed numbers with the same denominators. Do not read the word problem until you have filled in all the blanks! (That takes the fun out of it.) After filling in all the blanks, read and solve the word problem.

Math Lib #1

_____ and _____ are walking
person person

to _____. They walk
place

_____ of a mile and then stop for
fraction less than 1

a break. They then walk another

_____ miles. How long did they
mixed number

walk in all?

Math Lib #2

Jacob finds two _____
adjective

_____ (s) in his _____.
thing location in home

One of them measures _____
mixed number

inches long and the other measures

_____ inches long. What is the
mixed number

difference in the two lengths?

Math Lib #3
